

Dissemination Workshop on
'Study on Radioactive Waste in India'

Organised by the **Toxics Link** and Supported by the **Heinrich Böll Foundation**

Date: 2 December 2008

Time: 11:00 am – 4:00 pm

Venue: PHD House (Mohta Room), Siri Institutional Area, New Delhi

The workshop is a part of the recently concluded study taken up by Toxics Link, with support from Heinrich Boll Foundation, aimed at mapping the civilian nuclear fuel cycle in India with a clear focus on waste generation and management practices and flagging critical issues therein.

Toxics Link is an environmental NGO dedicated to bringing toxics related information into the public domain. We have expertise in the areas of municipal, medical and hazardous wastes, as well as in specific issues such as the international waste trade, and the emerging issues of chemicals safety.

The workshop seeks to bring together an eclectic mix of experts from the nuclear establishments, scientific community, academia, civil society, international agencies and media. The objective is to share the initial findings with the participants and seek inputs that can be incorporated in finalising the report. In addition, we expect the workshop to provide the participants a platform for holding a rich, informed discussion on the issue and suggest possible action points as a way forward.
